## Prevent Stormwater Pollution at Home

Employ these simple practices during winter weather to prevent Stormwater pollution! Stormwater pollution is a major cause of water pollution in our urban and suburban streams.

- Shovel snow first to remove it from paved surfaces, like driveways and sidewalks, before applying snow melt and deicing products.
- Pile shoveled snow downslope of paved surfaces to help prevent icy and slippery conditions on pavement as snow melts and refreezes.
- Limit the use of de-icing chemicals and products on sidewalks and driveways since they can readily flow into storm drains and streams as ice melts. When de-icing products that contain salt and as other constituents dissolve, they seep into ground water and flow into streams where they can impair water quality, diminish soil fertility, damage plants, and harm aquatic life.
- Use environmentally-friendly alternatives such as clean clay cat litter, sand, or fireplace/stove ash, to avoid the need for products that can have damaging impacts and be harmful to the environment.
- Sweep up after snowmelt – Sweep and dispose of residual sand, grit, and litter to help prevent accumulation in streets and roadside ditches, clogged storm drains and culverts, and sediment pollution in streams.
- Keep gutters and drainage pathways clear and free of debris to prevent snowmelt from backing up and forming ice in places where you want to runoff to flow freely.
- Direct, or route, snowmelt runoff into nearby gardens and vegetated areas before applying salt and de-icing products.
